National Statistics status

The UK Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

1 | Key Findings

1.1 Average Daily Prison Population

- The overall average daily prison population increased by 3.2% during 2021/22 to 1,494. Males increased from 1,393 to 1,428 while the female population increased from 55 to 66 (Figure 1 and Table 1e).
- The remand population increased slightly by 0.2% from 545 during 2020/21 to 546 this year and is at the highest level it has been over the last seven years (Figure 2 and Table 1a).
- During 2021/22, the average daily immediate custody population increased by 4.8% to 941. This is lower however than the totals recorded between 2015/16 and 2019/20. (Figure 2 and Table 1b).
- Prisoners aged between 30 and 39 years made up the largest proportion (36.5%) of the average daily immediate custody prison population and the remand population (35.3%) (Tables 2c and 3c).
- In terms of custodial sentence length, 27.3% of the average daily population during 2021/22 had custodial sentences of less than or equal to one year, an increase from 22.2% during 2020/21 (Table 8c).
- Violence Against the Person offences continued to account for the largest proportion (35.0%) of all principal offence categories for the daily immediate custody prison population and for the remand population (35.5%) (Figure 6 and Tables 11c and 13c).
- During 2021/22, those identifying as Catholic represented the largest proportion of the average daily prison population at 51.4% (768), while Protestant denominations and Other Christians accounted for 34.3% (513) (Figure 7 and Table 14e).

1 | Key Findings

1.2 Receptions and Discharges

- At 3,477, the number of receptions during 2021/22 was higher than 3,124 the previous year, an increase of 11.3% (Figure 8 and Table 15d).
- Remand receptions increased by 4.3% over the last year, up from 2,609 in 2020/21 to 2,722 during 2021/22 (Figure 9 and Table 15a).
- Receptions into immediate custody increased by 47.3% during 2021/22, to 670 compared to 455 the previous year. This followed a large drop of 39.0% between 2019/20 and 2020/21 which coincided with the first full financial year of the COVID-19 pandemic. (Figure 9 and Table 15b).
- The number of receptions for fine default and non-criminal increased by 41.7% from 60 during 2020/21 to 85 during 2021/22. This also follows on from a decrease between 2019/20 and 2020/21 of 46.9% (Figure 9 and Table 15c).
- 30 to 39 year olds accounted for the largest number of immediate custody receptions (250; 37.3%) (Figure 11 and Table 17c). This differed from remand receptions where the largest number was 973 receptions were for the 21 to 29 age group (35.7%) (Figure 11 and Table 18c).
- The majority of immediate custody receptions had a custodial sentence length of less than one year (76.6%) a small increase from 73.6% during 2020/21 (Figure 12b and Table 19b).
- Public Order and Violence Against the Person offences accounted for the largest proportion of immediate custody receptions, at 22.8% (153) and 19.0% (127) respectively, while, Violence Against the Person offences accounted for 32.8% of remand receptions (894) (Figure 13 and Tables 20c and 21c).
- The number of discharges decreased by 20.9%, from 4,152 during 2020/21 to 3,283 during 2021/22 (Figure 14 and Table 22).

2 | Introduction

2.1 About this report

This report contains key statistics relating to the average daily prison population levels, receptions and discharges for Northern Ireland during the 2021/22 financial year. It includes information by establishment, custody type, gender, age, sentence length and principal offence categories. The report also includes some international data for comparison purposes, as well as analysing trend data for the key statistics.

The data used in this report are taken from the Northern Ireland Prison Service Management Information System (PRISM). Details on the methodology used, data validation and definition of terms can be found in the Methodology and Counting Rules section at the back of this report.

This is an annual National Statistics publication and the contents of this report will be of interest to the public, government policy makers, academics and others who want to understand more about the prison population in Northern Ireland. Further information on National Statistics and Users can be found at the back of this report.

Details of data coverage, quality and methodology are detailed in Appendix 1. Data in all tables and charts in the report, along with supplementary data, are available in the accompanying data tables spreadsheet found on the [DoJ website](#).

The next update, covering the 12 months to 31 March 2023, is expected to be published in Autumn 2023. A full [publication schedule](#) is available on the DoJ website.

3 Average Daily Prison Population

3.1 Overview

The average daily prison population for 2021/22 was 1,494, an increase of 3.2% compared to the 1,448 reported in 2020/21 (Figure 1).

The increase in the average daily prison population during 2021/22 was found in three of the four prison establishments (Maghaberry, 943 from 931 in 2020/21; Magilligan, 431 from 399 in 2020/21; Hydebank Wood Females, 66 from 55 in 2020/21). Hydebank Males was the exception, decreasing from 64 during 2020/21 to 54, continuing a trend starting in 2019/20 (Table 1e).

The following sections look at average daily prison population by custody type and gender, as well as some of the characteristics of sentenced prisoners, namely age, sentence length and principal offence.

The following sections look at average daily prison population by custody type, gender, age, sentence length and principal offence

Figure 1: Average Daily Prison Population 2003 to 2021/22

3 | Average Daily Prison Population

3.2 Prisoner Type

3.2.1 Remand

The average daily remand prison population for 2021/22 was 546, accounting for 36.5% of the overall population. This was similar to the 545 reported during 2020/21. While this is a minimal increase on the previous year, it is the fourth consecutive year in which the remand population has increased, and the largest average daily remand population recorded.

The proportion of prisoners on remand has decreased during 2021/22, to 36.5% from 37.6% during 2020/21. This is the first decrease in the proportion of the average daily remand population since 2015/16 (Figure 2 and Table 1a).

3.2.2 Immediate Custody

During 2021/22 the average daily immediate custody prisoner population was 941, an increase of 4.8% from the previous year's level of 898. This is still lower than the average daily immediate custody prisoner population reported during the five years 2015/16 to 2019/20, each of which have been over 1,000 (Figure 2 and Table 1b).

The Department of Justice recently published statistics on prosecutions and convictions for 2021. This showed that overall custodial convictions during the 2021 calendar year increased by 19.4% from 2,561 during 2020 to 3,058 during 2021. This can be found at [Court Prosecutions Convictions and Out of Court Disposals 2021](#) on the DoJ website.

3 Average Daily Prison Population

3.2.3 Fine Default and Non Criminal Prisoners

The average daily fine default and non-criminal prisoner (immigrant detainee) population account for a small proportion of the overall average daily prison population (0.3% for fine default and 0.2% for non-criminal). Figures for both have remained fairly similar over each of the last five financial years with fine defaults never exceeding a daily average of seven and non-criminal never accounting for more than a daily average of five since 2015/16 (Tables 1c and 1d).

Figure 2: Average Daily Prison Population by Prisoner Type, 2015/16 to 2021/22

3 Average Daily Prison Population

3.3 Gender

Males accounted for the vast majority of the average daily prison population during 2021/22 (95.6%), increasing by 2.5% from 1,393 during 2020/21 to 1,428. The average daily female prison population also increased, but by a much greater rate from 55 during 2020/21 to 66 during 2021/22, an increase of 20.0% (Figure 3 and Table 1e).

During 2021/22, females accounted for 7.0% of the average daily remand population with the average increasing to 38 from 27 during 2020/21. Males accounted for 93.0% of the average daily remand population with the average decreasing from 518 during 2020/21 to 508 during 2021/22 (Table 1a).

The 2021/22 average daily immediate custody population was split 97.1% males and 2.9% females. While the average for males increased to 914, from 871 during the previous year, the female average remained unchanged (27).

Figure 3: Average Daily Prison Population by Gender, 2015/16 to 2021/22

3 Average Daily Prison Population

3.4 Current Age

Prisoners aged between 30 and 39 years accounted for the largest proportion of the immediate custody population during 2021/22 (36.5%), the fourth successive year that this has been the case. In the three years prior to 2018/19, prisoners aged 21 to 29 years accounted for the largest proportion. During 2021/22, the 30 to 39 years age group was followed by those aged 21 to 29 years (24.0%), 40 to 49 years (20.0%), 50 to 59 years (9.8%), 60+ years (8.2%) and 18 to 20 years (1.6%) (Figure 4 and Table 2c).

The age breakdown for the average daily remand population largely followed the same trend during 2021/22; the largest group was 30-39 years (35.3%), followed by 21-29 years (32.4%), 40-49 years (15.2%), 50-59 years (7.9%), 18-20 years (5.3%) and 60+ years (3.7%) (Figure 4 and Table 3c).

Comparing the average daily remand and immediate custody populations shows that a larger proportion of the remand (37.7%) than immediate custody population (25.6%) is accounted for in the younger age groups (18-20 year and 21-29 years).

Figure 4: Average Daily Prison Population under Sentence of Immediate Custody and Remand by Current Age, 2021/22

3 Average Daily Prison Population

3.5 Sentence Length

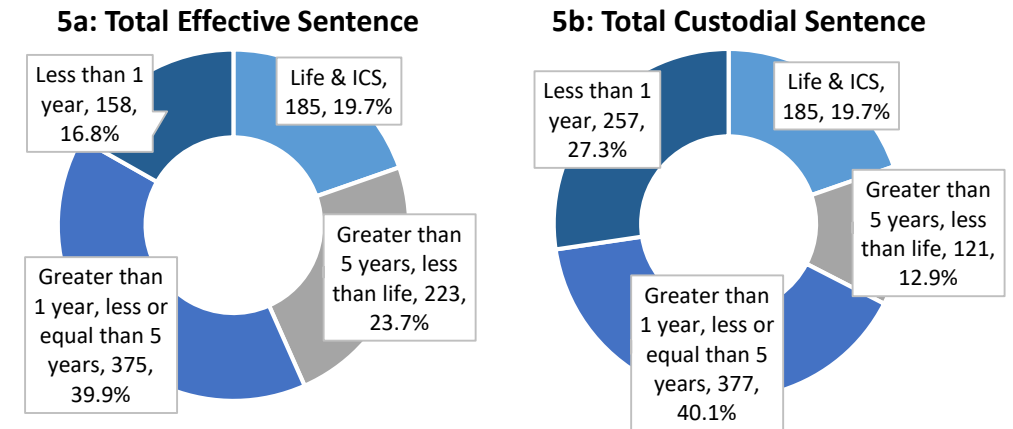

Figures 5a and 5b show the breakdown of total sentence length and total custody length for prisoners under sentence of immediate custody during 2021/22. Primarily, in terms of the prison population, the custodial length imposed is of greater significance than the total effective sentence length (which includes the licence element), as it is the custodial length which determines how long a person must initially spend in prison.

When compared to 2020/21, the average daily population for 2021/22 with sentence length categories of Life and Indeterminate Custodial Sentence (ICS) has remained similar, while greater than five years but less than life has decreased. Increases were found in the remaining categories; greater than one year but less than or equal to five years and greater than six months but less than or equal to twelve months and three months or less (Tables 4 to 9).

The average daily population during 2021/22 with custodial sentences of less than or equal to one year was 27.3%, an increase from 22.2% during 2020/21 (Tables 5c and 8c) .

Looking at gender and sentence length, 59.3% of the average daily female population during 2021/22 were sentenced to one year or less in custody, and 22.2% were serving life sentences (Table 8b). By comparison, 26.4% of males were sentenced to Less than one year in custody and 19.6% were serving life sentences (Table 8a).

Figure 5: Average Daily Prison Population under Sentence of Immediate Custody by Sentence Length, 2021/22

More detailed sentence length information can be found in Tables 4 to 9 of the accompanying spreadsheet, available from the Department of Justice website.

3 Average Daily Prison Population

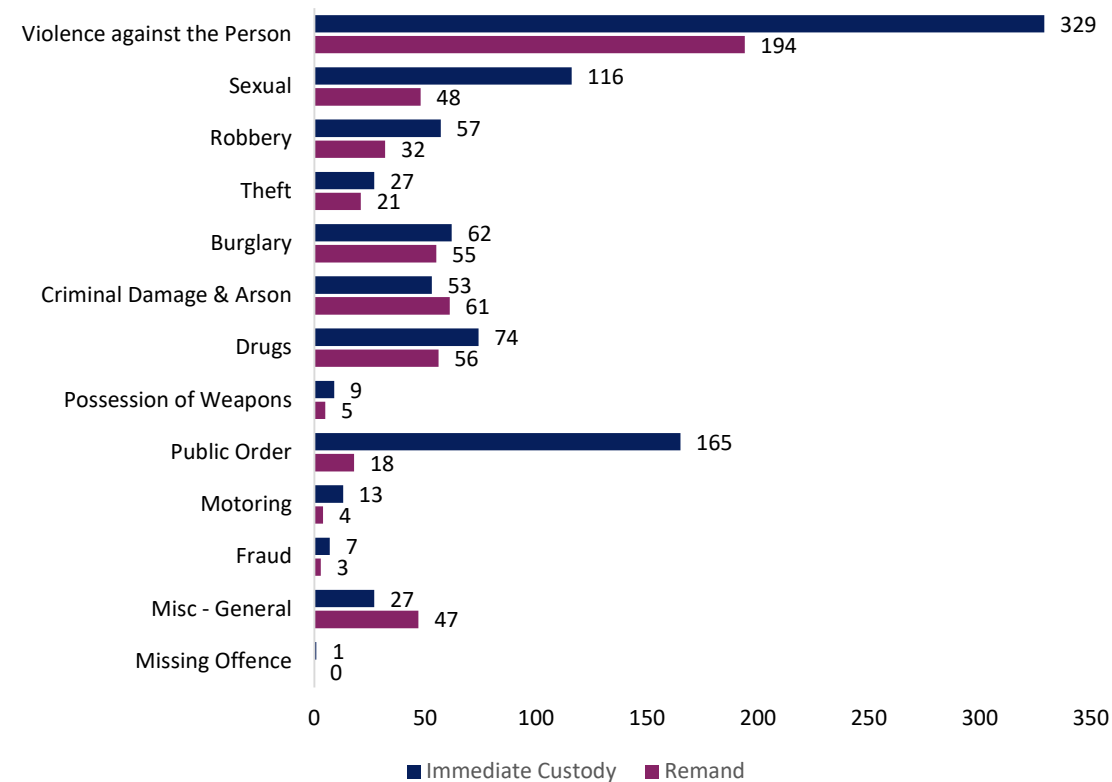

3.6 Principal Offence

For the average daily immediate custody population, 35.0% (329) of principal offences during 2021/22 were categorised as Violence against the Person, 17.5% (165) as Public Order Offences and 12.3% (116) as Sexual Offences (Figure 6). These categories have consistently represented the three largest proportions since offence classification was revised in 2015/16, with the overall breakdown remaining similar each year.

All offence categories have shown an increase during 2021/22, compared to 2020/21, with the exceptions of Robbery, Burglary and Public Order Offences, which have decreased, and Sexual Offences which remains unchanged (Tables 10c and 11c).

For the average daily remand population, 35.5% (194) of principal offences during 2021/22 were categorised as Violence against the Person, 11.2% (61) as Criminal Damage and Arson, 10.3% (56) as Drugs Offences, 10.1% (55) as Burglary and 8.8% (48) as Sexual Offences (Figure 6). These categories consistently account for approximately three-quarters of principal offences in the remand population since 2015/16 (Tables 12c and 13c).

Figure 6: Average Daily Prison Population under Sentence of Immediate Custody and Remand by Principal Offence Category, 2021/22

3 Average Daily Prison Population

3.7 Religion

During 2021/22, those identifying as Catholic represented the largest proportion of the average daily prison population at 51.4% (768), while Protestant and Other Christians accounted for 34.3% (513). Presbyterian accounted for the largest Protestant denomination at 15.7% (234).

No religion was reported for 10.7% (160) of the average daily prison population (Figure 7 and Table 14e).

The proportions for the average daily breakdown of religion have remained relatively similar since 2015/16.

Figure 7: Average Daily Prison Population Religion under Sentence of Immediate Custody by Sentence Length, 2015/16 to 2021/22

4 | Receptions into Prison

4.1 Overview

The number of receptions into prison increased by 11.3%, from 3,124 during 2020/21 to 3,477 in 2021/22 (Figure 8 and Table 15e). The 3,477 receptions were accounted for by 2,621 prisoners, giving a reception rate of 1.3, with 564 prisoners being committed into custody on more than one occasion during 2021/22. For comparison, during 2020/21, there 3,124 receptions for 2,340 prisoners, also with a reception rate of 1.3.

Remand accounted for 78.3% (2,722) of new receptions (Table 15a). The number of receptions for fine default and non-criminal increased across all establishments, with an overall increase of 41.7%, from 60 during 2020/21 to 85 during 2021/22. This is the first time the number of receptions for fine default and non-criminal receptions have increased since 2015/16, however it should be noted that 85 receptions is still lower in comparison to the years 2015/16 to 2019/20 (Table 15c).

After reception into custody, a prisoner’s custody type may change. During 2021/22, the overall number of custody type changes has shown a 3.3% decrease compared to 2020/21 (from 1,516 to 1,466). This is due to the 20.2% decrease in overall remand, from 545 to 435 (Table 16a).

Figure 8: Prison Receptions, 2015/16 to 2021/22

The subsequent sections of this report examine receptions by custody type, gender, age, sentence length and principal offence.

Please note, that there was a revision to how receptions are presented in 2021/22. This has been backdated to 2015/16, the findings of the 2021/22 year, however may not be directly comparable to previous reports. Further detail can be found in Appendix 1.

4 | Receptions into Prison

4.2 Prisoner Type

4.2.1 Remand

Remand receptions increased by 4.3% over the last year, up from 2,609 in 2020/21 to 2,722 during 2021/22. This resulted in remand receptions accounting for 78.3% of total receptions during 2021/22, although this is a decrease from 83.5% during 2020/21 which was the highest proportion of remand receptions recorded since 2015/16 (Figure 9 and Table 15a).

The number of custody type changes to remand after reception decreased by 3.3%, from 545 during 2020/21 to 435 during 2021/22 (Table 16a).

4.2.2 Immediate Custody

Receptions into immediate custody increased 47.3% during 2021/22, to 670 compared to 455 the previous year. This is primarily a consequence of male immediate custody receptions into Maghaberry and Magilligan increasing by 41.8% over the last year (from 421 to 597).

Receptions into immediate custody at Hydebank Wood males increased by 26.7% from 15 during 2020/21 to 19 during 2021/22. Most notable, receptions into immediate custody in Hydebank Wood females increased significantly by 184.2% from 19 during 2020/21 to 54 during 2021/22 (Table 15b).

The number of custody type changes to immediate custody has increased slightly, by 1.1% at 829 during 2021/22 compared to 820 during 2020/21 (Table 16b).

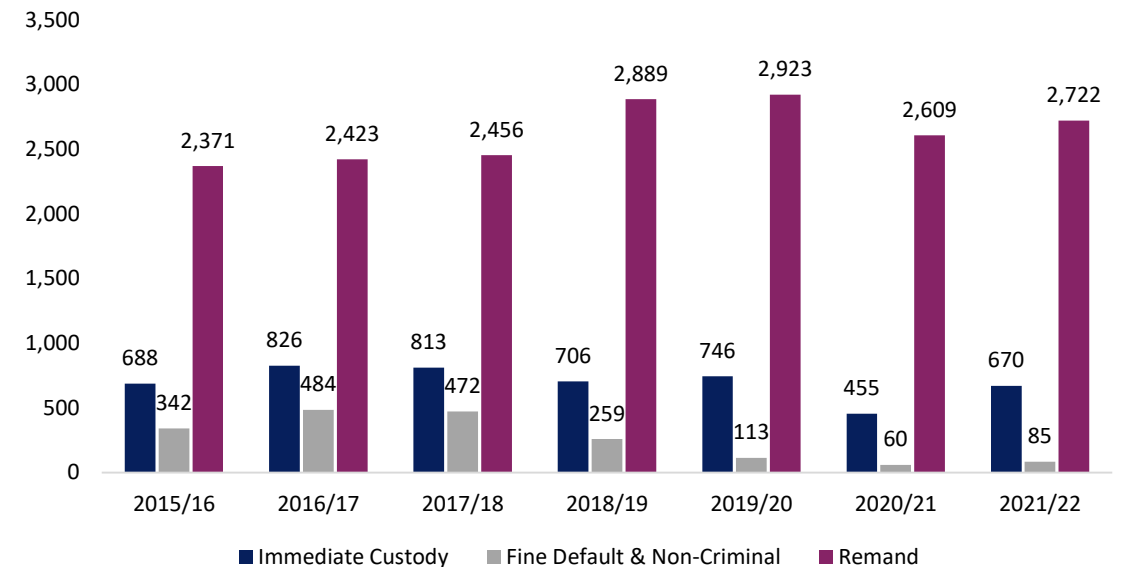

4 | Receptions into Prison

4.2.3 Fine Default and Non Criminal Prisoners

The number of fine default (where the individual was received into custody solely for fine default offences) and non-criminal receptions increased by 41.7%, from 60 in 2020/21 to 85 in 2021/22. This has been the first increase since 2016/17 (Figure 9 and Table 15c). Compared to the previous year, there was a 33.8% increase in the number of custody type changes to fine default or non-criminal during 2021/22 (Table 16c).

Due to the way in which the Northern Ireland Prison Service (NIPS) case management system (PRISM) inputs individual information, the methodology used in this report to compute receptions may under count the total number of fine default receptions, with further detail on this contained in Appendix 1. Nevertheless, this methodology is consistent with the approach taken in previous years.

Figure 9: Prison Receptions by Prisoner Type, 2015/16 to 2021/22

4 | Receptions into Prison

4.3 Gender

The total number of male receptions increased by 9.6%, from 2,891 during 2020/21 to 3,169 during 2021/22, and accounted for 91.1% of all new receptions into custody. The number of female receptions increased by 32.2% from 233 during 2020/21 to 308 during 2021/22 (Figure 10 and Table 15a). This increase is found for both remand and immediate custody receptions, but is predominantly driven by a significant increase in immediate custody receptions (41.3% for males and 184.2% for females) (Table 15d).

Receptions for fine default and non-criminal increased during 2021/22 for males (46.9%; 49 to 72), with a small increase in the number of female fine default and non-criminal receptions (18.2%; 11 to 13) (Table 15c).

In terms of custody type changes after reception, there was a significant decrease for male remands by 20.5% (from 523 during 2020/21 to 416 during 2021/22) and a small increase for immediate custody (2.1%; from 778 during 2020/21 to 794 during 2021/22) (Tables 16a and 16b). For females, remand custody type changes decreased by 13.6%, from 22 during 2020/21 to 19 during 2021/22, while the number of female immediate custody decreased by 16.7% from 42 during 2020/21 to 35 during 2021/22 (Tables 16a and 16b).

Figure 10: Receptions by Gender, 2015/16 to 2021/22

4 | Receptions into Prison

4.4 Age at Reception

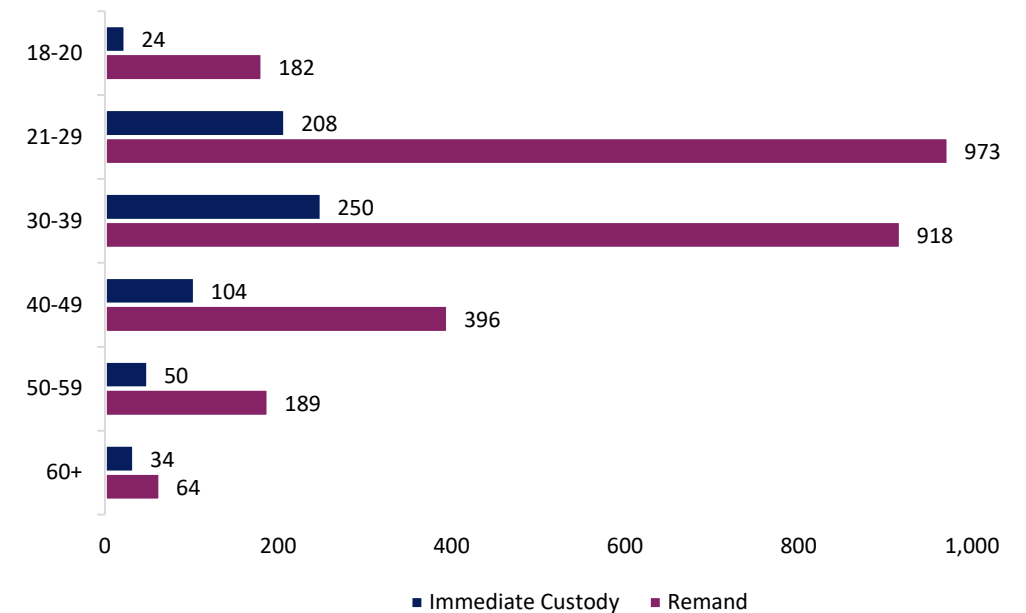

The largest number of immediate custody receptions were recorded within the 30 to 39 year age group (37.3%; 250), followed by those aged 21 to 29 (31.0%; 208) and 40 to 49 years (15.5%; 104) (Figure 11 and Table 17c).

These three age groups accounted for the majority of immediate custody receptions for both males and females, however the proportion for females was smaller (84.9% and 72.2% respectively) (Tables 17a and 17b).

The largest number of remand receptions were recorded within the 21 to 29 year age group (35.7%; 973), followed by the 30 to 39 (33.7%; 918) and 40 to 49 (14.5%; 396) year groups (Figure 11 and Table 18c).

These three age groups accounted for 84.3% of remand receptions for males and 81.3% for females (Tables 18a and 18b).

Figure 11: Immediate Custody and Remand Receptions by Prisoner Age, 2021/22

4 | Receptions into Prison

4.5 Sentence Length

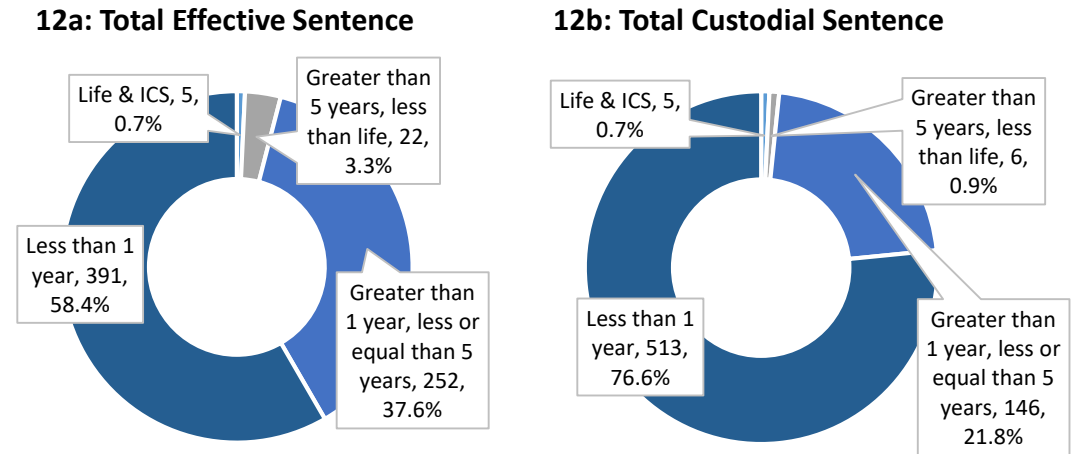

Figures 12a and 12b show the breakdown of sentences for immediate custody receptions for both the total sentence length and the custody sentence length. Primarily, in terms of the prison population, the custodial sentence imposed is of greater significance than the total effective sentence length (which includes the licence element), as it is the custodial length which determines how long a person must initially spend in prison.

Figure 12b shows that custodial sentences of less than one year accounted for the largest proportion of sentenced receptions (76.6%), a small increase from 73.6% during 2020/21.

The proportion of custodial sentences greater than one year and less than or equal to five years decreased slightly at 21.8% (146 receptions) during 2021/22 compared to 23.5% (107 receptions) the previous year.

More detailed sentence length information can be found in Table 17 of the accompanying spreadsheet, available from the Department of Justice website.

Figure 12: Immediate Custody Receptions by Sentence Length, 2021/22

4 | Receptions into Prison

4.6 Principal Offence

Public Order and Violence against the Person offences accounted for the largest proportions of immediate custody receptions, at 22.8% (153) and 19.0% (127) respectively (Figure 13 and Table 20c). For remand receptions, Violence against the Person and Criminal Damage and Arson accounted for the largest proportions, at 32.8% (894) and 17.4% (473) respectively.

In terms of gender, Violence against the Person accounted for 25.9% (14) of female and 18.3% (113) of male immediate custody receptions. Public Order offences accounted for 20.4% (11) of female and 23.1% (142) of male immediate custody receptions (Tables 20a and 20b). Violence against the Person offences also accounted for the largest proportion for remand receptions at 32.0% (77) for females, and 32.9% (817) for males. Criminal Damage and Arson accounted for 19.5% (47) of female and 17.2% (426) of male remand receptions (Tables 21a and 21b).

The proportionate breakdown of offence categories during 2021/22 remained broadly similar to those in 2020/21 (Figure 13 and Table 21c).

Figure 13: Immediate Custody and Remand Receptions by Principal Offence Category, 2021/22

5 Discharges from Prison

5.1 Discharges from Prison by Establishment

During 2021/22, there was a 20.9% decrease in discharges from prisons compared to the previous year (4,152 during 2020/21 and 3,283 during 2021/22). This decrease was across all establishments with the exception of Hydebank Wood Males, which increased by 4.2% from 259 during 2020/21 to 270 during 2021/22.

The vast majority of discharges from custody were males, accounting for 94.5% of all discharges during 2021/22 (Figure 14 and Table 22).

Figure 14: Discharges from Prisons, 2015/16 to 2021/22

6 | International Comparisons

6.1 Comparison of Selected European Jurisdictions

A range of international prison comparisons are published on the [World Prison Brief website](#). One such comparison relates to the prison population as a rate of every 100,000 of the overall population within each jurisdiction. Figure 15 shows the prison population per 100,000 people in the population for a selection of European countries, with the information based on the latest available at the start of September 2022. Please note that the sources for data varies and may include a snapshot of a single day during the year.

As illustrated in this figure, Northern Ireland has a rate of 90 prisoners for every 100,000 people in the population. The equivalent figure for both Scotland and England and Wales was 135. With a rate of 82, the Republic of Ireland's rate was the lowest of the British Isles.

Source: [World Prison Brief website](#) , accessed in September 2022

7 | Appendix 1 - Methodology and Counting Rules

7.1 National Statistics

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value.

All official statistics should comply with all aspects of the Code of Practice for Official Statistics. They are awarded National Statistics status following an assessment by the Authority's regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

It is the Department of Justice's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.

7.2 Users

The statistics included in this report are used extensively and meet a broad spectrum of user needs as shown below:

User	Summary of main statistical needs
DoJ Minister/Director General of the Northern Ireland Prison Service	Use the statistics to monitor the prison population and capacity of the prison estate
NI Assembly	Statistics are used to answer assembly questions
Policy teams in DoJ	Statistics are used to inform policy development and to monitor impact of changes over time and the impact they have on the system
Agencies responsible for offender management	Current and historical robust administrative data are used to support performance management information at national and local levels within each agency to complement their understanding of the current picture and trends over time
Academia, students and businesses	Used as a source of statistics for research purposes and to support lectures, presentations and conferences
Journalists	Used as a compendium of robust data on prison population
General public	Data are used to respond to ad-hoc requests and requests made under the Freedom of Information (FOI) Act

7 | Appendix 1 - Methodology and Counting Rules

7.3 Data Source

The data used in this report are derived from analysing the daily prison population for a given year, taken from the Northern Ireland Prison Service Management Information System (PRISM).

As this is mainly an administrative database, rigorous validation procedures are followed to ensure the data presented is as accurate as possible. More details on the validation procedures followed are included in the Data Quality and Validation Section of this report and in the [Quality Assurance of Administrative Data](#) report.

Whilst these procedures were carried out by the Analytical Services Group of the Department of Justice, the data is subject to the limitations inherent in any large scale recording system and to variation in recording practice over time.

Unlawfully at large prisoners are excluded from these numbers.

7.4 Consultations

This report was subject to a consultation exercise, during April/May 2018, regarding proposed changes to the reporting period.

The consultation invited responses to the proposal of using financial year data as the main reporting period for future publications. The responses were favourable, with no objections to the proposed changes. As a result, this publication focuses mainly on data by financial year.

Another user consultation exercise was conducted in May/June 2022 focusing on the inclusion of additional detail for remand data, committal number, discharge numbers and religious group information. The majority of responses were favourable and as a result the changes have been implemented for this publication.

Details of the consultations can be found at [Northern Ireland Prison Service Statistics and Research](#) on the DoJ website.

7 | Appendix 1 - Methodology and Counting Rules

7.5 Average Prisoner Population

Daily prison population snapshots are downloaded from the PRISM system as at midnight; the average daily prisoner population for a given year is derived from the average of these.

7.6 Receptions Data

Receptions are counted whenever there is an entry into prison (committal). If a prisoner is released and is subsequently committed on the same or different custody status this is counted as a new reception. The receptions data are based on the premise that when a person is received more than once during a year he/she will be counted separately on each occasion.

If a prisoner is committed and released on the same day then they will not be included in this analysis as the daily population snapshot is taken at midnight.

During 2021/22, the presentation of receptions data was changed to distinguish between new receptions (committals) into custody during the year, and changes in custody type. Receptions data has backdated to 2015/16 to reflect this change.

7.7 Custody Type Data

Custody Type changes are counted whenever there is a change in a prisoner's custody type from one day to the next during the same reception (committal). For example, if during the time period in question a prisoner is custody type remand, then without being released is sentenced, this would count as one remand custody type and one sentenced custody type. However, if a sentenced prisoner receives another sentence whilst currently serving a sentence, this will not be counted as a new sentenced custody type, as the custody type has not changed.

Custody type does not include reception type, so if a prisoner is committed as remand and is then sentenced, this is counted a one sentenced custody type, with the remand being counted as a reception.

The custody type data are based on the premise that when a person's custody type changes during the same year, they will be counted separately on each occasion, including each occasion of change of status between remand, sentenced, fine default or non-criminal during the same period of custody.

7 | Appendix 1 - Methodology and Counting Rules

7.8 Age

For the daily averages the age of a prisoner is calculated at the time of the snapshot.

For receptions data, the age of a prisoner is calculated at age of the reception.

Some of the tables in this report refer to 'adult' and 'young' prisoners. An 'adult' is aged 21 years and over and a 'young' prisoner is aged under 21 years.

7.9 Offence Grouping

An extensive exercise was carried out in late 2013 by statisticians across Criminal Justice in Northern Ireland, to reclassify all offences into main offence groupings, as far as possible, that are more in line with England and Wales. Due to this exercise receptions data published prior to 2009 on offence groupings will not be directly comparable with those from 2009 onwards. Data relating to averages pre 2013 on offence groupings will also not be directly comparable, as data published on averages pre 2013 used the old classification system.

A review was also carried out in 2017 which resulted in two offence categories being re-classified. The two groupings which are affected are Public Order and

Other Offences. Recalls and revocation of licence offences are no longer classified as Other Offences; they are now classified as Public Order Offences. As a result of these changes, it is not possible to compare any data relating to these two categories contained in this report with any data relating to these two categories from previous reports. However, all data contained in this report for previous years have been revised to take this new methodology into account.

During 2019/20 a further review of these categories was undertaken with the aim of achieving more standardised reporting of offence classifications across the justice system in Northern Ireland. As a consequence of these changes, there may also be slight variances in the category within which some cases are counted across the period of this report.

Misc. Sexual and Liquor Licence offence have been counted within the Other Offences category.

7 | Appendix 1 - Methodology and Counting Rules

7.10 Principal Offence

Where a person is received under sentence for two or more offences, only the principal offence is used. Following a review during 2013 by statisticians in the Department of Justice, Northern Ireland, an updated algorithm for calculating principal offence was adopted. Details on this can be found in a paper discussing [principal offence methodology](#) on the DoJ website.

Due to the way data is stored and extracted in PRISM, sentence lengths for each individual offence cannot be extracted; as such calculating principal offence using actual sentence length is not possible. Instead principal offence using the principal at trial algorithm is used as the basis for calculating principal offence for prison statistics. This calculates principal offence based on the offence that has the statutory highest maximum sentence.

For offences with the same highest maximum sentence then further flags are used to calculate the principal offence. More detail on this can be found in the linked paper. Due to slight differences in data, the methodology is adapted for Prison purposes. PRISM holds a flag which determines if the offence is a main offence or not; this flag is used in the Prison methodology. The actual offence date is held in PRISM but due to difficulties extracting this, it cannot be used as a method for calculating principal offence. As such this step in the process is replaced by ordering based on the numerical offence code for each offence.

7 | Appendix 1 - Methodology and Counting Rules

7.11 Sentence Length

If a person is received under sentence for two or more offences at the same time, sentence length is taken as the longest of any concurrent sentences, with consecutive sentences being treated as one sentence equal in length to the sentences added together.

However, if a sentenced prisoner receives another sentence whilst currently serving a sentence, the sentence details of the first sentence are used to work out sentence lengths.

7.12 Type of Prisoner

Currently there are three prison establishments in Northern Ireland - HMP Magilligan, HMP Maghaberry and Hydebank Wood. Female prisoners are held in a separate unit within Hydebank Wood.

Whilst the prison population consists mainly of offenders sentenced by the courts to immediate custody for criminal offences, it also includes fine defaulters, remand prisoners and a small number of non-criminal prisoners.

Fine defaulters are those who have been given a fine by the courts and have not paid the fine within a stipulated time, and have then been the subject of a warrant issued by the court. The duration of sentence is dependent upon the amount of the unpaid fine and ranges from one week where the default is £200 or less, to ten years where the default exceeds £1 million.

Remand prisoners include those charged with an offence and whom the courts have ruled should be detained in custody pending trial; those whom the courts have permitted to be released on bail pending trial but have not as yet met the conditions (usually financial) of the bail; those who had been released on bail but have subsequently been re-admitted to prison because they breached a condition of bail; and those who have been found guilty by the court but have been ordered to be detained in custody pending sentence.

Non-criminal prisoners are mainly made up of those being held under the terms of the Immigration Act.

7 | Appendix 1 - Methodology and Counting Rules

7.13 Data Quality and Validation

The following steps are taken to quality assure this information for statistical purposes.

The data used to derive the information originates from the Northern Ireland Prison Service (NIPS) case management system (PRISM). This is a live recording system which is used extensively by NIPS for day to day case management purposes. As such the information extracted, while subject to human data entry error, needs to be highly accurate as it is the main information tool used to manage prisoners on a day-to-day basis, to list their status/privileges and, for that matter to regulate discharge dates/record sentence lengths. It is used not only by Prison Service Staff but also Probation Staff. The data from which the average population and receptions information are derived are therefore core fields, the accuracy of which is a requirement for the effective handling of day-to-day prison operations.

It is perhaps important to emphasise that Prison Service Staff themselves have a vested interest in the complete reliability of the data populated into the fields used for this analysis.

Information is not derived from subsidiary screens which do not contribute to the officer's own capacity to discharge his/her duties or which can be bypassed without impacting immediately on the officer's own work.

The procedure undertaken to derive the statistics now has the following stages. A data download is extracted from PRISM which includes details on individual prisoners. This is imported into the statistical package SPSS and this data is used as the primary source of information to calculate the prison population. Rigorous validation exercises are then conducted to ensure that the information produced is as accurate as possible.

These Data Quality and Validation procedures can be split into two parts, firstly ensuring the data from PRISM is accurate and up to date. For this purpose, manual checks are carried out and data corrected to ensure:

- that all sentenced prisoners have a sentence length;
- that there are no sentence lengths that are discrepant (e.g. murder offences attracting a sentence of 7 days);

7 | Appendix 1 - Methodology and Counting Rules

- that the total effective sentence adds up to the custodial sentence plus the licence sentence;
- that the stated age of prisoners is appropriate and realistic (e.g. no-one aged 8,108, etc.);
- that the gender of prisoners is appropriate for the prison establishment (e.g. no male prisoners in a female prison); and
- that a general check of the data as a whole suggests no other anomalies.

Any such discrepancies identified at this stage (for which there may on, albeit rare, occasion be a valid reason) are checked out against the Integrated Court Operations System (ICOS), the Criminal Records Viewer and additional screens on PRISM itself. Any issues are resolved on an individual basis.

Secondly, an extensive manual cross checking exercise is conducted using PRISM to ensure that after manipulating the data, the information produced is correct. A list of all receptions for each prisoner is listed and details are then cross checked manually against the records held on PRISM.

After validating and updating the database using the above method, 5.9% of cases were changed. Whilst these checking procedures are extensive and robust, it is not possible to validate every case so it is worth noting that the statistics contained in the report are inevitably subject to the limitations inherent in any large-scale recording system and to variations in recording practice over time. However, as PRISM is used extensively for the operation of the core business and the fields used are fields in the accuracy of which officers themselves have a strong vested interest, one can now be confident in the accuracy and robustness of the source administrative data to a degree much greater than would normally be the case with administrative systems requiring lower degrees of operational precision.

Following guidance provided by the Office for National Statistics on the Quality Assessment of Administrative Data, information pertaining to data quality and validation is continually being assessed.

7 | Appendix 1 - Methodology and Counting Rules

7.14 Presentation

For ease of use daily average figures are rounded to the nearest whole number whereas percentages throughout the text are to one decimal point.

Tables referred to in this report and other supplementary tables are also published alongside this report in Microsoft Excel and OpenDocument Spreadsheet format.

Components in tables and charts may not sum due to rounding.
