### Introduction

### The Public Prosecution Service

The Public Prosecution Service for Northern Ireland (PPS), which is headed by the Director of Public Prosecutions, is the principal prosecuting authority in Northern Ireland. In addition to taking decisions as to prosecution in cases investigated by the police, it also considers cases investigated by other statutory authorities, such as HM Revenue and Customs.

The primary role of the PPS is to reach decisions to prosecute or not to prosecute and to have responsibility for the conduct of criminal proceedings. A range of options is also available for dealing with offenders other than through prosecution. These options include cautions, informed warnings and youth conferencing. Prosecutors may also refer offenders to the National Driver Alertness Scheme or to a Community Restorative Justice Scheme.

### **Perceptions of the Public Prosecution Service**

Between 2013 and 2018, the PPS published *Perceptions of the Public Prosecution Service: Finding from the Northern Ireland Omnibus Survey,* including results from a module of 5 questions relating to public awareness and public confidence in the PPS. Survey information is used by the PPS for a variety of purposes, such as informing the development of policy and assessing the effectiveness of communication. Data in respect of the PPS's effectiveness and its fairness and impartiality are also used as key performance indicators for the Service. Findings from *Perceptions of the Public Prosecution Service: Finding from the Northern Ireland Omnibus Survey* can be found on the PPS website at <a href="https://www.ppsni.gov.uk/Surveys-and-Research-7881.html">https://www.ppsni.gov.uk/Surveys-and-Research-7881.html</a>

Due to the discontinuation of the Northern Ireland Omnibus Survey in 2018, the PPS commissioned a module for inclusion in the Northern Ireland Life and Times Survey (NILT) 2018. This particular survey was selected due to its methodology broadly matching that of the Omnibus Survey and its representativeness across Northern Ireland.

### The Life and Times Survey

The Northern Ireland Life and Times (NILT) Survey was launched by the University of Ulster and Queen's University of Belfast in the autumn of 1998. Its mission is to monitor the attitudes and behaviour of people in Northern Ireland annually to provide a time-series and a public record of how attitudes and behaviour develop on a wide range of social policy issues. The survey is run on a modular format and aims to provide a local resource for use by the general public and a data source for public and academic debate.

The survey consists of a number of different modules, each based on a specific topic. The modules included in the 2018 survey were: respect, ethnic minorities, abortion, good relations, equality issues, palliative care, political attitudes, the criminal justice system and community safety and perceptions of paramilitary influence.

Whilst the NILT Survey closely mirrors the Omnibus Survey in terms of the methodology for selecting respondents, there are some differences. For example, the NILT Survey tends to focus on a small range of related policy issues, involving in-depth questioning, whereas the Omnibus Survey usually involved a larger

number of unrelated modules. This has provided a new context for the PPS module to that of the Omnibus Survey.

A total of four questions specific to the PPS were included in the 2018 NILT Survey in order to gauge the following:

- Public awareness of the PPS (Question 1);
- Views as to the PPS's effectiveness in prosecuting people accused of committing a crime (Question 2);
- Public perceptions of the PPS's independence (Question 3); and
- Public perceptions of the PPS's fairness and impartiality (Question 4).

Question 1 was asked of all respondents. Questions 2, 3 and 4 relate only to those respondents who had heard of the PPS (i.e. respondents who had answered 'yes' at (Question 1).

Detailed notes have been supplied, which provide an account of the technical aspects of the survey, including the origin of the sample, response rates and its representativeness (see Annex 2: Technical Notes, page 15).

### About this Report

This report provides information in respect of the 2018 NILT Survey, conducted between September 2018 and February 2019. As this is the first year the PPS has commissioned a module in the Survey, no earlier data are available for comparison purposes.

Analysis of each of the PPS questions is available across ten key variables, as follows: Age-group, gender, religion, partnership status, limiting health condition/disability status, dependant status, employment status, qualification level, socio-economic classification and PPS Region. For the purposes of this report, the analysis has been limited to age, gender and religion. However, data in respect of any of the remaining variables can be provided on request (see contact details below).

It should be noted that the 2018 NILT Survey has produced a relatively high proportion of people who answered 'don't know' in response to the questions. These 'don't knows' have been excluded from the main body of the report. As such, the focus of the bulletin is on those people who have offered an opinion regarding the PPS. However, in the interests of transparency, the full results (including the 'don't know' responses) have been set out at Annex 1: Survey Data - see page 11. As the proportion of 'don't knows' within the Omnibus Survey results was small, these were normally included within the published results. Therefore this bulletin differs in this respect when compared with previous Omnibus Survey publications.

Percentages in the tables may not add to 100% due to rounding. Unweighted base numbers across the tables will vary due to the exclusion of 'don't knows'.

### **Official Statistics**

The statistics within this report are 'Official Statistics' as defined in Section 6 of the Statistics and Registration Services Act 2007. Statisticians from the Northern Ireland Statistics and Research Agency are seconded to the PPS and are responsible for ensuring that the statistics produced comply with the Code of Practice for Official Statistics.

# **Survey Findings**

### Question 1 – Had you heard of the Public Prosecution Service for Northern Ireland, 'the PPS'?

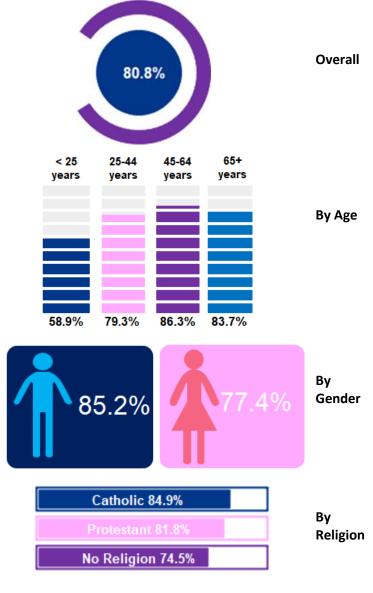

### **Key Findings**

- Overall, four fifths of respondents (80.8%) stated that they had heard of the PPS.
- Those in the 45-64 age band reported the highest level of awareness (86.3%), while those aged under 25 reported the lowest level of awareness of all the age bands (58.9%).
- A higher proportion of males (85.2%) than females (77.4%) reported that they had heard of the PPS.
- A higher proportion of Catholics (84.9%) than Protestants (81.8%) stated that they had heard of the PPS. Respondents in the 'no religion' category had a lower level of awareness of the PPS (74.5%).

#### Table 1: Awareness of the PPS\*

Response	Yes	No	Unweighted Base
All Adults	80.8%	19.2%	1,184
Age			
<25 years	58.9%	41.1%	87
25-44 years	79.3%	20.7%	371
45-64 years	86.3%	13.7%	395
65+ years	83.7%	16.3%	318
Gender			
Male	85.2%	14.8%	497
Female	77.4%	22.6%	687
Religion			
Catholic	84.9%	15.1%	423
Protestant	81.8%	18.2%	491
No Religion	74.5%	25.5%	200

\* Excluding 'Don't Know' responses.

% answering 'Yes'

## **Question 2 -** How confident are you that the Public Prosecution Service is effective at prosecuting people accused of committing a crime?

### **Key Findings**

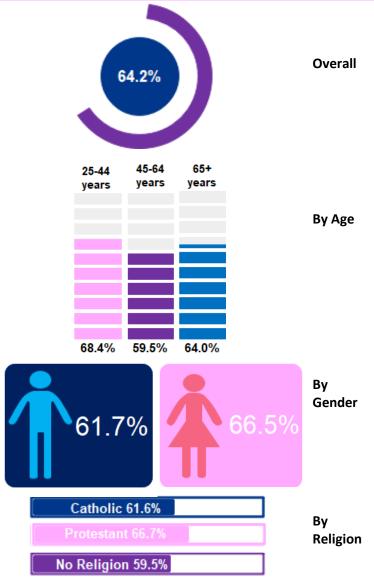

- Overall, almost two-thirds of respondents (64.2%) were confident that the PPS is effective at prosecuting people accused of committing a crime.
- Those in the 25-44 age band reported the highest level of confidence (68.4%), compared with 59.5% of 45-64 year olds.
- There was a higher proportion of females (66.5%) than males (61.7%) had confidence in the effectiveness of the PPS.
- A higher proportion of Protestants (66.7%) than Catholics (61.6%) had confidence in the effectiveness of the PPS. Those in the 'no religion' category had a lower level of confidence (59.5%).

#### Table 2: Confidence in the effectiveness of PPS\*

Response	Very Confident/	Not very Confident/	Unweighted Base
	Fairly Confident	Not at all Confident

% answering 'Very Confident/Fairly Confident'

## **Question 3 -** How confident are you that the Public Prosecution Service provides a fair and impartial prosecution service?

### **Key Findings**

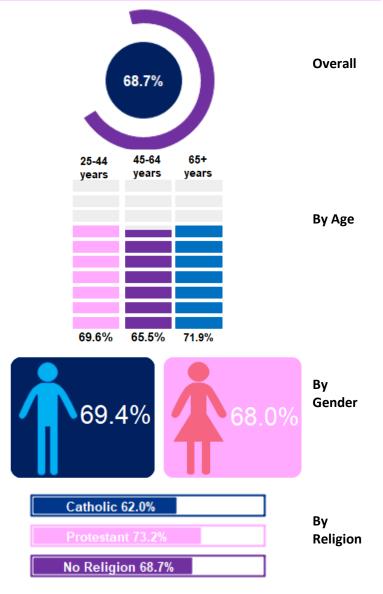

- Overall, more than two-thirds of respondents (68.7%) were confident that the PPS provides a fair and impartial prosecution service.
- Those in the 65+ age band reported the highest level of confidence (71.9%), while those aged 45-64 reported the lowest level of confidence (65.5%).
- There was a slightly higher proportion of males (69.4%) than females (68.0%) who reported confidence in a fair and impartial service.
- A higher proportion of Protestants (73.2%) than Catholics (62.0%) stated that they were confident in a fair and impartial service. Respondents in the 'no religion' category had a confidence level of 68.7%.

### Table 3: Confidence in the PPS providing a fair and impartial service\*

Response	Very Confident/ Fairly Confident	Not very Confident/ Not at all Confident	Unweighted Base
All Adults	68.7%	31.4%	825
Age			
<25 years**	N/A	N/A	46
25-44 years	69.6%	30.5%	247

Protestant	73.2%	26.8%	355
No Religion	68.7%	31.3%	129

\* Excluding 'Don't Know' responses.

\*\* Percentage breakdown not provided where base number is under 50.

% answering 'Very Confident/Fairly Confident'

## *Question 4* - How confident are you that the Public Prosecution Service takes its prosecution decisions independently? (That is, independent of police, Government or any other body).

### **Key Findings**

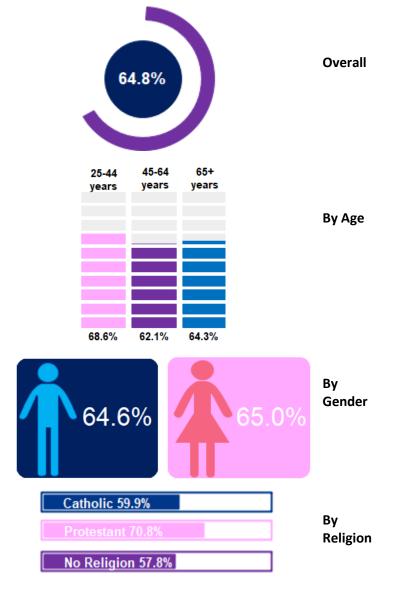

- Overall, almost two-thirds of respondents (64.8%) were confident that the PPS takes prosecution decisions independently.
- Those in the 25-44 age band reported the highest level of confidence (68.6%), while those aged 45-64 reported the lowest level of confidence (62.1%).
- Sixty-five per cent of females were confident in the PPS taking prosecution decisions independently compared with 64.6% of males.
- A higher proportion of Protestants (70.8%) than Catholics (59.9%) stated that they were confident in an independent service. Respondents in the 'no religion' category had a confidence level of 57.8%.

Response	Very Confident/ Fairly Confident	Not very Confident/ Not at all Confident	Unweighted Base
All Adults	64.8%	35.2%	818
Age			
<25 years**	N/A	N/A	42
25-44 years	68.6%	31.4%	247

# Annex 2 Technical Notes

### **Ethical Approval**

The 2018 Northern Ireland Life and Times Survey received ethical approval from the Ethics Committee in the School of Social Sciences, Education and Social Work, Queens University Belfast, where the survey coordinator is based.

### The overall design

The 2018 Northern Ireland Life and Times Survey involved 1,201 face-to-face interviews with adults aged 18 years or over. The main interview was carried out using computer assisted personal interviewing (CAPI) and the respondent was then asked to complete a self-completion questionnaire.

The PPS module was part of the main interview carried out via CAPI.

### Pilot and mainstage fieldwork

All interviews were conducted by Ipsos MORI interviewers in the participants' homes. Pilot interviews with 50 participants were carried out during 4th–11th September 2018. The main stage of the fieldwork was undertaken during the period 18th September 2018 to 5th February 2019.

An advance letter was issued by Ipsos MORI to all sampled addresses prior to the interviewer calling at each address. The letter explained the purpose and rationale for the survey as well as contact details for the staff managing the project. Individuals were informed how their personal data would be handled in line with General Data Protection Regulations (GDPR), and their right to withdraw from the research if they did not want to take part.

### Sampling and Response Rate

The sample for the 2018 survey consisted of a systematic random sample of addresses selected from the Postcode Address File (PAF) database of addresses. This is the most up-to-date and complete listing of addresses. Private business addresses were removed from the database prior to sample selection. A total of 2,250 addresses were selected for interview. Throughout the survey period, an additional 1,000 addresses were extracted. However, the figure in Table 2.1 below only refers to addresses which were issued and where attempts were made to obtain an interview.

The Postcode Address File (PAF) provides a good sampling frame of addresses, but contains no information about the number of people living at an address. Further selection stages were therefore required to convert the listing of addresses to a listing of individuals from which one person (the 'selected respondent') is chosen to complete the questionnaire.

The person to be interviewed was randomly selected using the 'next birthday' rule. The interviewer asked the householder to list the birthdays of all members of the household eligible for inclusion in the sample: that is, all persons aged 18 or over living at the address.

The person with the next birthday, at the time of the call, was the person with whom the interview was to be conducted. Where the selected respondent was not available, an appointment was made to call back to interview them at a more suitable time.

From a set sample of 2,161 addresses, 1,201 interviews were achieved giving a response rate of 56%.

**Table 2.1** shows the status of addresses, and the number of addresses in scope.**Table 2.2** shows the breakdown of response.

Table 2.1 Status of addresses					
Total addresses issued	Ineligible vacant/derelict/c		Total in scope		
2,296	135 2,161				
Table 2.2 Breakdown of response					
	Number	Percent			
Total co-operating	1,201	56			
Fully co-operating	1,201	56			

Refusal to co-operate	653
Non-contact	253
Other	54
Total	2,161

### Representativeness

Partially co-operating

Selecting only one individual for interview at each address means individuals living in large households have a lower chance of being included in the sample than individuals living in smaller households. The data presented in this bulletin has been weighted to prevent a bias towards smaller households. To assess how accurately a survey sample reflects the population of Northern Ireland, the characteristics of the sample are compared with the characteristics of the Northern Ireland population from Mid-Year Population Estimates. The NILTS Sample has also been compared to the achieved sample of the Continuous Household Survey. Table 2.3 shows this comparison and Table 2.4 a profile of the survey sample.

Table 2.3: Representativeness of the Sample NILTS 2018 by Ageand Gender				
Individual Characteristics	NILTS 2018	CHS 2017/18	Mid-Year Population Estimates 2017

\*Includes 'no religion' and religion not stated

\*\* Supplemented from household membership

### Weighting

Selecting only one individual for interview at each sampled address means that the probability of selection for the survey is inversely related to the size of the household. In other words, individuals living in large households have a lower chance of being included in the sample than individuals in small households.

Before analysis, all households which provided a selected respondent are examined and the data are weighted in relation to the number of eligible adults at the address derived from the details of household structure recorded by interviewers on the questionnaire. This weighting process adjusts the results to those that would have been achieved if the sample had been drawn as a random sample of adults rather than of addresses.

On occasions, in tables showing weighted data, the sum of column totals does not equal the grand total. This is due to the rounding process associated with weighting. The percentages in the tables are based on weighted data but the totals are unweighted.

### **Sampling Errors and Confidence Intervals**

Due to a combination of both sampling and non-sampling error, any sample is unlikely to reflect precisely the characteristics of the population. The number of cases upon which analysis is based is important, as it influences the precision (standard error) of the estimates. The Public Prosecution Service does not routinely publish estimates where the Unweighted Base is less than 50 cases.

Because NILTS estimates are subject to sampling error, differences between population subgroups may occur by chance.

The table below set outs sampling errors and confidence intervals at the 95% confidence level relating to a Systematic Random Sample design as used in the survey. Note that the margin of error for all sample estimates is within the parameters of  $\pm 2.8\%$ .

Table 2.5 Sampling errors and confidence intervals for keyvariables (unweighted data)			
	%	Margin of Error	
Age			
18-24	7.2	1.46	
25-34	14.6	2	
35-44	17.1	2.13	
45-54	17.7	2.16
