Web PSNI Statistics

The number of drug seizure incidents recorded by the police showed a mainly upwards trend between 2006/07 and 2021/22. Drug-related arrests mainly increased between 2006/07 and 2019/20 followed by a fall in each of the last two financial years.

In 12 months from 1st April 2021 to 31st March 2021:

- There were 8,594 drug seizure incidents, an increase of 166 (2.0 per cent) on the previous 12 months.
- There were higher numbers of Class A and Class B drug seizure incidents and a fall in the number of Class C seizure incidents.
- Cannabis (Class B) was the most commonly seized drug, followed by cocaine (Class A) and benzodiazepines (Class C).
- Seven policing districts showed an increase in drug seizure incidents.
- There were 3,137 drug-related arrests, a decrease of 188 (5.7 per cent) when compared with the previous 12 months.
- Six policing districts showed a decrease in drug-related arrests, with Derry City and Strabane showing the largest fall.

Coverage

This release is produced in accordance with the pillars and principles set out in the Code of Practice for Statistics.

Statistics on police recorded drug seizures and arrests in Northern Ireland are collated and produced by statisticians seconded to the Police Service of Northern Ireland (PSNI) from the Northern Ireland Statistics and Research Agency (NISRA).

This release presents provisional statistics relating to police recorded drug seizures and arrests to 31 March 2022. Figures were compiled on 10 May 2022; as of that date 97.8% of seizure incidents for April 2021 to March 2022 have been fully validated; 2.2% are fully/partly outstanding or are still awaiting FSNI confirmation. As seizure incidents continue to be processed, this will lead to an increase in the number of drug seizures recorded since April 2021, particularly for the most recent quarter January to March. Supplementary data are available from the PSNI website in the <u>drug seizures and arrests spreadsheet</u>, <u>169KB (opens in a new window)</u>.

The next update covering provisional figures for the 12 months to 30 June 2022 will be published on 28th July. The PSNI website has a full <u>publication schedule</u>, <u>32KB (opens in a new window)</u>.

Drug Seizure Incidents

Statistics in this publication relate to incidents in which a drug controlled under the <u>Misuse of Drugs Act (1971)</u> <u>legislation (MDA) (opens in a new window)</u> is seized, recovered or found by police. This includes drugs intercepted in the post and drugs which are handed in to the police.

Also included within this publication is information on seizures of substances within the scope of the <u>Psychoactive</u> <u>Substances Act 2016 legislation (PSA) (opens in a new window)</u>.

Drug-Related Arrests

A drug-related arrest is counted when a person is arrested and processed through custody for one or more drugrelated offences. A more detailed definition is provided in Section 5 Trends in Drug-related Arrests.

Points to be aware of

- As these statistics are based on drug seizures that have been recorded by the police, changes in the quantity and type of drugs seized, and also in the number of drug-related arrests, can be affected by police activity.
- Not all drug seizures are subject to forensic testing to officially confirm the drug type seized. When testing is not applied, the seized drugs are classified in accordance with the investigating officer's assessment of the drug type seized, based on their experience and knowledge of the illegal drug trade in Northern Ireland.
- Not all drug use will come to the attention of the police.
- These statistics should not themselves be considered a measure of drug prevalence in Northern Ireland. Other sources of information relating to drug misuse are provided in the <u>Drug Seizures and Arrests User Guide PDF</u> (<u>333KB</u>) (opens in a new window) which accompanies this publication, and may be considered alongside this publication to obtain a more comprehensive overview of the drug situation in Northern Ireland.

Points to note

Other Agency Seizures: Drugs seized by the Border Force are published quarterly by the Home Office as <u>Border</u> <u>Force transparency data (opens in a new window)</u>, with Border Force seizures in each of England, Wales, Scotland and Northern Ireland presented separately. Border Force and National Crime Agency seizures within Northern Ireland are not presented in this publication.

Recording Practice: Drug seizures often involve the seizure of multiple classes and types of drugs. This means that seizure figures for individual drug classes or types cannot be added together to produce totals, as this can exceed the overall number of seizures. Further details are available in the <u>Drug Seizures and Arrests User Guide</u> <u>PDF (333KB) (opens in a new window)</u>.

Geographic breakdown: Seizure incidents and arrests are provided at policing district level; policing districts are analogous to District Council areas. During the latest twelve months Belfast City policing district accounted for nearly 30 percent of all drug seizure incidents and nearly 40 per cent of drug-related arrests recorded in Northern Ireland. It includes four local policing teams based in Lisburn Road (South), Tennent Street (North), Strandtown (East) and Woodbourne (West). To assist in the understanding of the statistics drug seizure incidents for Belfast City policing district have been captured at this geographic level from the start of 2016/17, while this breakdown is available for drug-related arrests from 2006/07.

2. What is happening to drug seizures over the longer term?

The number of drug seizure incidents has increased each year since 2006/07, with the exception of a slight fall in 2016/17. The level recorded in 2021/22 (8,594 seizure incidents) is more than three times the level recorded in 2006/07 (2,590 seizure incidents).

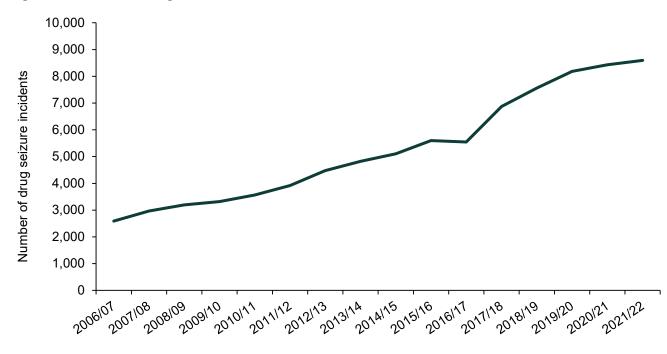

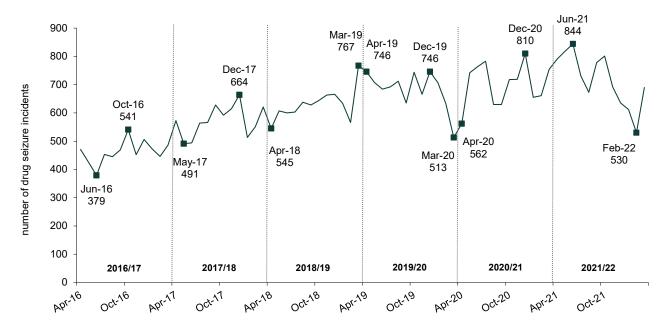

Figure 1 Trends in drug seizure incidents since 2006/07

Figure 2 shows the pattern of drug seizure incidents each month since April 2015. Lockdown measures in relation to Covid-19 were introduced on 23rd March 2020 and may have had an impact on the number of drug seizures since this date. Covid-19 legal restrictions were replaced by guidance on 15th February 2022.

More detailed information on drug seizure trends is available in the <u>Annual Trends report (opens in a new window)</u> on the PSNI website.

3. What has been happening to drug seizures more recently?

In the 12 months from 1st April 2021 to 31st March 2022:

- There were 8,594 drug seizure incidents, an increase of 166 (2.0 per cent) on the previous 12 months when 8,428 were recorded.
- There were higher numbers of Class A and Class B seizure incidents, and a fall in Class C seizure incidents.
- Cannabis (Class B) was the most commonly seized drug, followed by cocaine (Class A) and benzodiazepines (Class C). Figure 4 shows the change in the number of seizure incidents by type of drug seized during the latest 12 months compared with the previous 12 months.
- The trend in drug seizure incidents is similar to that seen for the number of drug offences recorded by police over the same time period. Drug offence figures are available in the Pivot Table-Crime worksheet in the <u>Police</u> <u>Recorded Crime spreadsheet for March 2022, 0.6MB (opens in new window)</u>. Please note that as seizure incidents continue to be processed, this will lead to an increase in the number of drug seizures recorded since April 2021, particularly for the most recent guarter January 2022 to March 2022.

Details of the quantities of each drug type seized are available in Tables 4 and 5 of the <u>drug seizures and arrests</u> <u>spreadsheet</u>, <u>169KB</u> (opens in a new window).

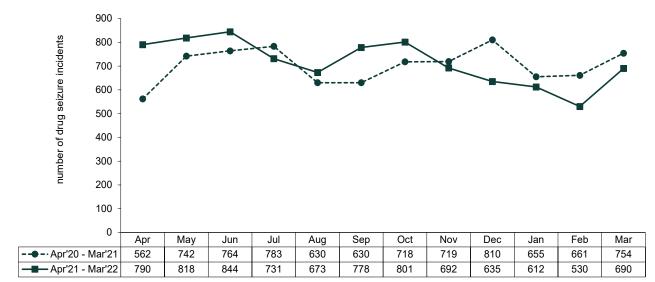

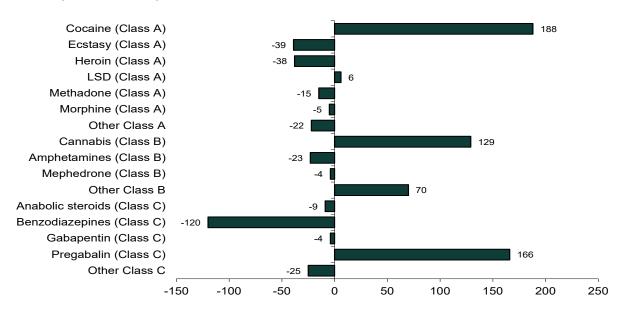

Figure 3 Drug seizure incidents April 2021 to March 2022

Figure 4 Change in the number of seizure incidents by type of drug seized, 12 months to March 2022 compared with the previous 12 months

Drug class ²	Drug type ²	Drug seizure incidents Apr'20-Mar'21	Drug seizure incidents Apr'21-Mar'22 ³	change
Class A	Cocaine	1,094	1,282	188
	Ecstasy	154	115	-39
	Heroin	172	134	-38
	LSD	21	27	6
	Methadone	22	7	-15
	Morphine	19	14	-5
	Other Class A ⁴	107	85	-22
	All Class A	1,508	1,592	84
Class B	Herbal cannabis	5,316	5,464	148
	Cannabis resin	138	137	-1
	Cannabis plants	131	97	-34
	Cannabis, other formats	673	700	27
	Total cannabis	5,881	6,010	129
	Amphetamines	131	108	-23
	Mephedrone	7	3	-4
	Other Class B⁵	140	210	70
	All Class B	6,058	6,185	127
Class C	Anabolic steroids	47	38	-9
	Benzodiazepines	1,323	1,203	-120
	Gabapentin	47	43	-4
	Pregabalin	637	803	166
	Other Class C ⁶	233	208	-25
	All Class C	1,949	1,912	-37
All drugs		8,428	8,594	166

Table 1 Number of drug seizures¹ by class and drug type

¹ As each seizure incident can involve more than one class or type of drug, seizure figures for individual drugs cannot be added together to produce totals as this will sum to more than the total number of seizures.

² Not all drug seizures are subject to forensic testing to officially confirm the drug type seized. When testing is not applied, the PSNI's drug seizure statistics are classified in accordance with the investigating officer's assessment of the drug type seized based on their experience and knowledge of the illegal drug trade in Northern Ireland.

³ Changes can be expected to figures from 1st April 2021 each time they are published as these records are subject to ongoing validation and quality assurance processes. Finalised figures for the period April 2021 to March 2022 will be published in September 2022.

⁴ Other Class A drugs include fentanyl/ fentanyl derivatives, oxycodone, psilocin (magic mushrooms) and methamphetamine (crystal meth).

⁵ Other Class B drugs include cathinone derivatives, codeine/ dihydrocodeine, tetrahydrocannabinol (THC), ketamine, barbiturates and synthetic cannabinoid receptor agonists.

⁶ Other Class C drugs include tramadol, buprenorphine, GHB/ GBL and 'Z-class' drugs (zolpidem, zopiclone and zaleplon).

4. Drug seizures - what has been happening in policing districts?

When comparing the current and previous 12 months, seven policing districts showed an increase in drug seizure incidents. [Table 2 and <u>drug seizures and arrests spreadsheet</u>, <u>169KB</u> (opens in a new window)]

Figure 5 Change in drug seizure incidents by policing district, 12 months to March 2022 compared with the previous 12 months

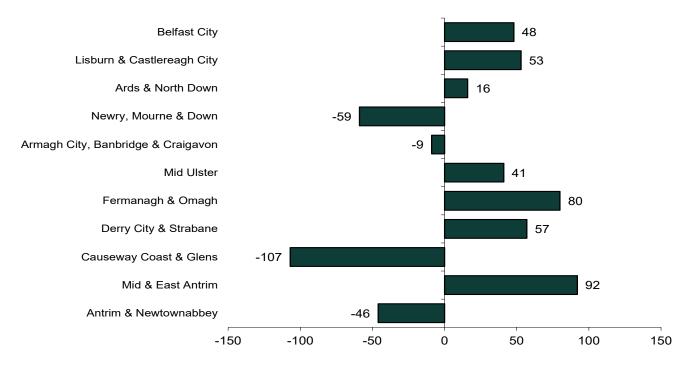

Table 2 Drug seizure incidents by policing district

Policing district ¹	Drug seizure incidents Apr'20-Mar'21	Drug seizure incidents Apr'21-Mar'22 ²	change
Belfast City	2,483	2,531	48
East	445	377	-68
North	739	679	-60
South	829	999	170
West	470	476	6
Lisburn & Castlereagh City	668	721	53
Ards & North Down	317	333	16

Armagh City, Banbridge & Craigavon	806	797	-9
Mid Ulster	504	545	41
Fermanagh & Omagh	294	374	80
Derry City & Strabane	826	883	57
Causeway Coast & Glens	557	450	-107
Mid & East Antrim	787	879	92
Antrim & Newtownabbey	487	441	-46
Northern Ireland	8,428	8,594	166

¹ Seizure incidents are provided at policing district level; policing districts are analogous to District Council areas. Belfast City policing district accounts for nearly 30 percent of all drug seizure incidents recorded in Northern Ireland. It includes four local policing teams based in Lisburn Road (South), Tennent Street (North), Strandtown (East) and Woodbourne (West).

² Changes can be expected to figures from 1st April 2021 each time they are published as these records are subject to ongoing validation and quality assurance processes. Finalised figures for the period April 2021 to March 2022 will be published in September 2022.

5. What is happening to drug-related arrests over the longer term?

A drug-related arrest is counted when a person is arrested and processed through custody for one or more drugrelated offences. The figures presented are a count of custody records rather than a count of persons arrested. Where a person has been arrested on more than one occasion during a financial year, each occasion on which they have been arrested will be counted separately. The arrest figures do not include persons who are streetbailed but are not later processed through custody.

The number of arrests for drug offences has increased in most of the years between 2006/07 and 2019/20, with falls experienced in 2014/15 (1.3 per cent) and 2016/17 (8.2 per cent). Subsequent falls have been recorded in each of 2020/21 (13.2 per cent) and 2021/22 (5.7 per cent). The level recorded in 2021/22 (3,137) is nearly twice that recorded in 2006/07 (1,709).

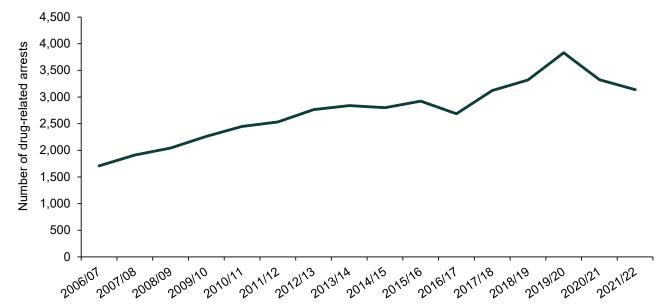

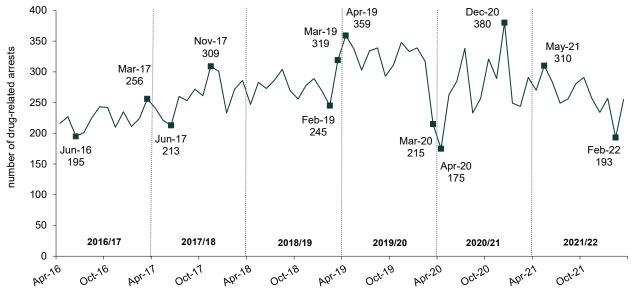

Figure 6 Trends in drug-related arrests since 2006/07

Figure 7 shows the pattern of drug seizure incidents each month since April 2016. Lockdown measures in relation to Covid-19 were first introduced on 23rd March 2020 and may have had an impact on the number of drug arrests since this date. Covid-19 legal restrictions were replaced by guidance on 15th February 2022.

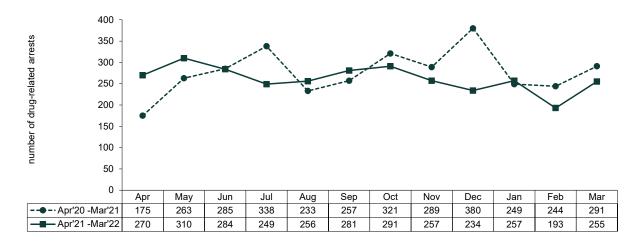

More detailed information on drug seizure trends is available in the <u>Annual Trends report (opens in a new window)</u> on the PSNI website.

6. What has been happening to drug-related arrests more recently?

In the 12 months from 1st April 2021 to 31st March 2022:

- There were 3,137 drug-related arrests, a decrease of 188 (5.7 per cent) when compared with the previous 12 months. [Table 3 and <u>drug seizures and arrests spreadsheet</u>, <u>169KB</u> (opens in a new window)].
- The trend in drug-related arrests is similar to that seen for the number of drug seizure incidents and drug offences recorded by police over the same time period. Drug offence figures are available in the Pivot Table-Crime worksheet in the Police Recorded Crime spreadsheet for March 2022, 0.6MB (opens in new window).
- There were 193 drug-related arrests in February 2022 which is the lowest monthly figure since April 2020.
- The largest falls in drug arrests between April 2021 and March 2022 when compared with previous 12 months were seen in July, December and February which were lower by 89, 146 and 51 respectively.
- Drug-related arrests were higher in five of the months during 2021/22 when compared with the previous 12 month period, with April and May showing the highest increases of 95 and 47 respectively.

Figure 8 Drug-related arrests April 2020 to March 2022

7. Drug-related arrests - what has been happening in policing districts?

When comparing the current and previous 12 months, six policing districts showed a decrease in drug-related arrests. Derry City and Strabane showed the largest decrease. Belfast City accounted for nearly two fifths of all drug-related arrests during the latest 12 months. [Table 3 and <u>drug seizures and arrests spreadsheet, 169KB</u> (opens in a new window)

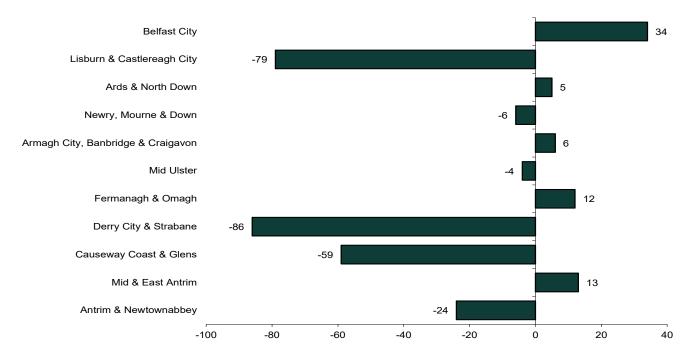

Table 3	Drug-related arrests by policing district
---------	---

Policing district ¹	Drug-related arrests Apr'20-Mar'21	Drug-related arrests Apr'21-Mar'22 ²	change	
Belfast City	1,204	1,238	34	
East	184	181	-3

8. Background and Data Quality

Data Collection

When a drug is seized by police there are procedures in place that cover the handling, management, storage and disposal of seized substances. One requirement of these procedures is that the details of the seized substances are added to PSNI's record management system. Statistics on drug seizures are based on information extracted from PSNIs record management system and separately collated on a bespoke database. In order for a seizure to be included in the published statistics a range of information is required including, but not limited to, drug type, drug format, estimated weight or quantity seized and any details relating to forensic examination.

Drug-related arrests are extracted from custody data, where a person has been arrested and processed through police custody for one or more drug-related offences, those arrests related to the Misuse of Drugs Act are presented in this bulletin. Persons arrested and street-bailed, dealt with by other means or whose detention was not authorised are not included in these statistics.

Data Quality

A quality assurance process is in place to ensure that the data is fit for purpose and published to the highest possible standard. A set of checks have been written to identify incidents that indicate drugs may have been seized. Where there are no drugs details available, each record will be followed up to confirm seizure and ensure the required details are input. A range of data quality checks are regularly conducted on the seizure data to identify incomplete or inconsistent records, potential duplication of records and input errors. Large seizures are also checked.

Further details on Police Recorded Drug Seizure and Arrest statistics are available in the <u>Drug Seizures and</u> <u>Arrests User Guide PDF (333KB) (opens in a new window)</u>.

Classification of Drug Types

The Misuse of Drugs Act 1971 divides drugs into three categories, Class A, B and C, according to the harmfulness they cause to the user or to society when they are misused. Class A drugs are considered to be the most harmful. Further information on drugs covered under the MDA is available in this <u>controlled drugs list (opens in a new window)</u>.

Class A	Class B	Class C	
Cocaine	Amphetamines	Anabolic Steroids	
Ecstasy	Cannabis	Benzodiazepines	
Heroin	Mephedrone	Pregabalin ³	
LSD	Other Class B ²	Gabapentin ³	
Methadone		Other Class C ⁴	
Morphine			
Other Class A ¹			

¹ Other Class A drugs include fentanyl, oxycodone, psilocin (magic mushrooms) and methamphetamine (crystal meth).

² Other Class B drugs include cathinone derivatives, codeine/dihydrocodeine, tetrahydrocannabinol (THC), ketamine and synthetic cannabinoid receptor agonists.

³ Other Class C drugs include tramadol, buprehorphine, GHB/GBL and 'Z-class' drugs (zolpidem, zopiclone and zaleplon).

Data Use

The drug seizures and drug-related arrests statistics are mainly used within PSNI as management information and to monitor performance on drug crime targets against the policing plan. The figures are also used by government departments and other voluntary and statutory agencies to inform debate and policy development regarding drug crime in NI.

Data Availability

A consistent data series at the overall level of drug seizure incident and drug-related arrest is available dating back to 2006/07, while a consistent data series at the level of individual drug type and format is available for the period dating back to 2012/13. These data series are published in in the <u>Annual Trends report (opens in a new window)</u> on the PSNI website.

Publication

The PSNI website has a full publication schedule, 32KB (opens in a new window).

Tables and charts in this bulletin are available on the PSNI website in the form of an accompanying spreadsheet, which also provides additional levels of detail. It is available in both <u>excel spreadsheet format (opens in a new window)</u> and <u>open document spreadsheet format (opens in a new window)</u>.

Related information available on the PSNI website

Police Recorded Crime Statistics (opens in a new window). These statistics are updated on a monthly basis and a trends report is published annually

<u>Crime Outcomes (opens in a new window)</u>. This annual publication summarises the outcomes that have been assigned to crimes recorded by the police since 2015/16.

Copies of other PSNI publications are available from the PSNI website (opens in a new window).
